Ground Breaking News
Special Edition - PDAC 2019

CRUSH IT!

The Impact Canada Clean Technology Challenges’ ‘Crush it!’ Challenge was launched on October 30, 2018. Participants were invited to develop new innovative solutions to reduce the energy intensity, cost and environmental impacts of comminution-based mineral processing. Crush it! Challenge semi-finalists will present their solutions to a “shark-tank”-style panel of cross-industry titans at a live finale at Goldcorp’s #DisruptMining event on March 3rd 2019, during the PDAC annual convention.

CEMI is proud to be a part of the FedNor funded Northern Ontario Mining Showcase (NOMS) at PDAC which provides an opportunity to Northern Ontario mining supply and service companies to promote their products and services to an international audience.

This event demonstrates that collectively Northern Ontario firms have the expertise, capacity and infrastructure to service the requirements of various small and large scale projects. The goal of the NOMS project is to provide support to Northern Ontario small and medium enterprises within the mining sector in leveraging new business through identifying potential partners, opportunities and networks.

WHY ENGAGE CEMI?

CEMI helps solve mining industry challenges. We accelerate the delivery of commercially viable innovations to improve operational performance. Simply said, our services are designed to bridge the gap between a challenge and a solution.

OUR SERVICES

- **Innovation Scouting**
  Global search for current and emerging pre-commercial solutions

- **Challenge Identification**
  Review of existing challenges from technology road maps and uncovers hidden challenges using a systems analysis process

- **Challenge Solution Matching**
  Matches current and emerging pre-commercial solutions with validated industry challenges

- **Commercialization Services**
  CEMI conducts innovation and commercialization gap analysis assessments and offers services to bridge identified gaps

CEMI’s objective is to help the mining sector achieve step-change improvement in performance by accelerating the adoption of innovations in mines and by increasing the innovation capacity of the mining service companies that deliver techniques and technologies to the industry. There is no shortage of good ideas, or partially developed solutions to the very real problems that confront mining operations, but the process of converting these into commercially viable products and services that mining companies can adopt, is slow and difficult. The need for mines to achieve step-change improvement in operational performance is urgent and we are finding ways to make this happen more quickly and efficiently.

We focus on:

- Accelerating the commercialization of technical solutions to be market ready — **Viable Products & Services**
- Managing networks of technical solution providers and innovative SMEs — **Sector Collaboration**
- Systematically target issues relevant to the global mining industry as well as regional and national ones — **SME Export Market**
- Searching globally for solutions to locally critical operational bottleneck — **Industry-Identified Priorities**
